# Upgrading your API mocking with WireMock extensions

Bas Dijkstra bas@ontestautomation.com www.ontestautomation.com

### WireMock use cases

### Testing earlier

Testing more

Testing more often

# Out of the box, WireMock can already do many things

### Before we begin, a word of caution...

Request filtering

Custom request matchers

Post-serve actions

Request filtering

Custom request matchers

Post-serve actions

### Request filtering

```
_Modify incoming requests (or halt processing)
```

```
_This has a variety of use cases:
   _Checking authentication details
   _Request header injection
   _URL rewriting
```

\_Created by extending StubRequestFilter class

### Request filtering

in action

Request filtering

Custom request matchers

Post-serve actions

#### Custom request matchers

\_Add custom request matching logic to WireMock

\_Can be combined with existing standard matchers

\_Done by extending RequestMatcherExtension class

## Custom request matching

in action

Request filtering

Custom request matchers

Post-serve actions

#### Post-serve actions

\_Perform specific actions after serving response

Logging, writing to database, ...

Done by extending PostServeAction class

### Post-serve actions

in action

Request filtering

Custom request matchers

Post-serve actions

### Response transformation

\_Create responses in a more dynamic and reusable fashion

```
Two types of use cases
```

- Define response definition
- Add specific information to existing response

\_Done by extending ResponseDefinitionTransformer and ResponseTransformer class, respectively

### Response (definition) transformers

in action
